─────── MODULE *GraphUtils* ───────

A digraph is a pair of a set of nodes and a set of directed edges, each of which is a pair of nodes.

$IsGraph(G) \triangleq$ Represented by a record with node field and edge field.
        $\land$ $G = [node \mapsto G.node,\ edge \mapsto G.edge]$

$EmptyGraph \triangleq [node \mapsto \{\{\}\},\ edge \mapsto \{\}]$

$g \oplus h \triangleq$ A union (in terms of set) of two graphs g and h.
        $[node \mapsto g.node \cup h.node,\ edge \mapsto g.edge \cup h.edge]$
